

UNIDAD TEMATICA NRO 4 - RESPUESTAS

5.

$$I(x_i) = \log_2 1 / P(x_i)$$

$$P(\text{alf}) = 1/32$$

$$I(\text{carácter}) = \log_2 32 = 5 \text{ Sh}$$

$$R_{ta} = I(\text{total}) = 20 \text{ Sh}$$

6. Secuencia: 0 1 0 1 0 1 0 0 0 0 1

$$H = - \sum_{k=1}^n \log_2 P(x_k) p(x_k)$$

$$H = \sum (P(x_k) * \log_2 1/(P(x_k)))$$

$$I(x_i) = \log_2 1 / P(x_i)$$

$$P(0) = 2/3 \quad ; \quad P(1) = 1/3$$

$$I(0) = \log_2 3/2 = 0,585 \text{ Sh}$$

$$I(1) = \log_2 1/3 = 1,585 \text{ Sh}$$

$$>P(x) \Rightarrow < I(x)$$

$$H = \sum (P(x_k) * \log_2 1/(P(x_k)))$$

$$H = (2/3 * 0,585 \text{ Sh}) + (1/3 * 1,585 \text{ Sh}) = R_{ta} = H = 0,92 \text{ Sh/simbolo}$$

7. $P(m1) = 0,2 \quad ; \quad P(m2) = 0,5 \quad ; \quad P(m3) = 0,3$

$$I(x_i) = \log_2 1 / P(x_i)$$

$$I(m1) = \log_2 1/0,2 = 2,321 \text{ Sh}$$

$$I(m2) = \log_2 1/0,5 = 1 \text{ Sh}$$

$$I(m3) = \log_2 1/0,3 = 1,737 \text{ Sh}$$

$$H = \sum (P(x_k) * \log_2 1/(P(x_k)))$$

$$H = (0,2 * 2,321 \text{ Sh}) + (0,5 * 1 \text{ Sh}) + (0,3 * 1,737 \text{ Sh}) = \text{Rta: } H = 1,4855 \text{ Sh/simbolo}$$

9.

$$I(x_i) = \log_2 1 / P(x_i)$$

$$I(A) = \log_2 4 = 2 \text{ Sh}$$

$$I(B) = \log_2 4 = 2 \text{ Sh}$$

$$I(C) = \log_2 8 = 3 \text{ Sh}$$

$$I(E) = \log_2 4 = 2 \text{ Sh}$$

$$I(L) = \log_2 3 = 1,58 \text{ Sh}$$

$$I(\text{CABLE}) = 3 + 2 + 2 + 3 + 2 = 12 \text{ Sh} \quad \text{Rta: } I(\text{CABLE}) = 12 \text{ Sh}$$

11.

Pixel

Imagen: 600x300

a. IMAGEN:

$$I(\text{pixel}) = \log_2 8 = 3 \text{ Sh}$$

$$I(\text{imagen}) = 3 * 300 * 600 = 540.000 \text{ Sh}$$

b. 1000 palabras:

$$P(\text{voc}) = 1/100000$$

$$I(\text{palabra}) = \log_2 100000 = 16,60 \text{ Sh}$$

$$I(1000 \text{ palabras}) = 16600 \text{ Sh}$$

c. Comparación: $540000 \text{ Sh} > 16600 \text{ Sh}$, Rta: Quedo demostrado el proverbio

12.

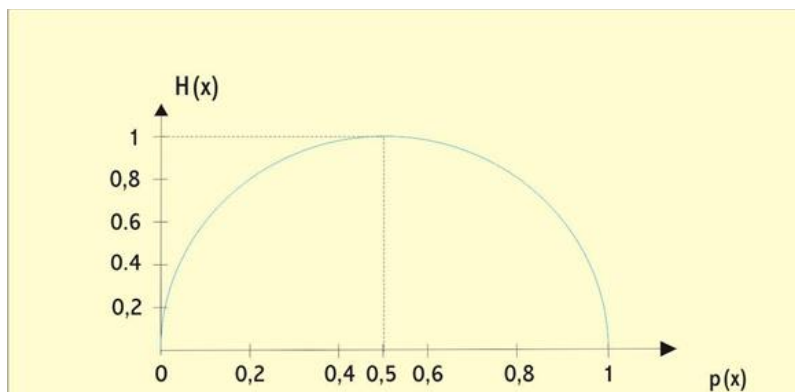

$$H = \sum (P(x_k) * \log_2 1/(P(x_k)))$$

$$P(0) = 1/2 \quad ; \quad P(1) = 1/2$$

$$I(0) = \log_2 2 = 1 \text{ Sh}$$

$$I(1) = \log_2 2 = 1 \text{ Sh}$$

$$H = (0,5 \cdot 1 \text{ Sh}) + (0,5 \cdot 1 \text{ Sh}) = \text{Rta} = \mathbf{H=1 \text{ Sh/simbolo}}$$

13.

→ Imagen: 640x480

$$P(.) = 1/256$$

$$I(.) = \log_2 256 = 8 \text{ Sh}$$

$$I(\text{imagen}) = 8 \cdot 480 \cdot 640 = \mathbf{2.457.600 \text{ Sh}}$$

$$T(\text{total Tx}) = 2.457.600 \text{ Sh} / 33.600 \text{ Sh/seg} = \mathbf{73,143 \text{ seg}; \text{ Rta: } 73,143 \text{ seg}}$$

Comparación:

Imagen: 25x80 Código ASCII de 8 bits $\Rightarrow 2^8 = 256$ niveles ; $P(.) = 1/256$

$$I(\text{texto}) = \log_2 256 = 8 \text{ Sh}$$

$$I(\text{m texto}) = 8 \cdot 25 \cdot 80 = \mathbf{16.000 \text{ Sh}}$$

$$T(\text{total Tx}) = 16.000 \text{ Sh} / 33.600 \text{ Sh/seg} = \mathbf{0,476 \text{ seg}; \text{ Rta: } 0,476 \text{ seg}}$$

14.

$$\Gamma = \frac{H(x)}{\tau}$$

$$H = \sum (P(x_k) \cdot \log_2 1/P(x_k))$$

Sh/simbolo

$$\tau = \sum (P \cdot t)$$

Seg/simbolo

$$I(.) = \log_2 3/2 = 0,585 \text{ Sh}$$

$$I(-) = \log_2 3 = 1,585 \text{ Sh}$$

$$H = (2/3 * 0,585 \text{ Sh}) + (1/3 * 1,585 \text{ Sh}) = 0,92 \text{ Sh/simb}$$

$$\tau = (2/3 * 0,2 \text{ seg}) + (1/3 * 0,4 \text{ seg}) = 0,266 \text{ seg/simb}$$

$$T = 0,92 \text{ Sh/simb} / 0,266 \text{ seg/simb} = 3,459 \text{ Sh/seg} ; \text{ Rta: } 3,459 \text{ Sh/seg}$$

15. Imagen TV: 625x500

$$P(.) = 1/128$$

$$I(.) = \log_2 128 = 7 \text{ Sh}$$

$$I(\text{imagen}) = 7 * 625 * 500 = 2.187.500 \text{ Sh}$$

$$T = 20 \text{ imagenes} * 2.187.500 \text{ Sh} = 4.375.000 \text{ Sh/seg}$$

Ahora bien la relación debe ser: $T \leq C$ (caso contrario se genera más información que la que puede viajar por un canal, implica pérdida de información).

Entonces Si de máxima $T = C$ $C = 4.375.000 \text{ bps}$

Rta: $T = 4.375.000 \text{ Sh/seg}$ y $C = 4.375.000 \text{ bps}$
